

NetworKit::JaccardMeasure  
::getDissimilarity

```
graph LR; A[NetworKit::JaccardMeasure::getDissimilarity] --> B[NetworKit::Graph::number  
OfNodes]; A --> C[NetworKit::Graph::forNode  
Pairs];
```

The diagram illustrates the dependencies of the `NetworKit::JaccardMeasure::getDissimilarity` function. It is represented by a gray rectangular box on the left. Two blue arrows originate from the right side of this box, pointing to two white rectangular boxes on the right. The top arrow points to a box containing the text `NetworKit::Graph::number OfNodes`. The bottom arrow points to a box containing the text `NetworKit::Graph::forNode Pairs`. All boxes have a black border.
